

Lily Kendall
Project 1 Individual Report
Web Programming

For this project I created the menu bar, the composition modal, the notifications page and the slime trail page. I also combined everyone's files and validated them all when everyone was finished. I do feel like I did not have as much work as everyone else because the pages I got were relatively similar to other examples. I did recognize that and consistently asked my group if I could assist with various coding problems or whatever anyone needed. Putting the entire page together and validating the files took a good amount of work so I feel I made a good contribution in doing that. My part was done within the first few days, and I spent a lot of the time waiting to see if anyone needed anything.

My group had some communication issues and we had trouble finding times when we could all meet. I would try to message my group to check up on their progress and would almost always not get a response. I am a perfectionist and prefer to finish assignments before the deadline so I wish my group communicated more on their progress so we could get the assignment in faster. Everyone was very respectful and helpful overall and we all wanted to strive to do well on the project. Everyone did well with taking their portion and working hard to make sure it was good quality. Even though we had different schedules, we all went out of our way to make time to meet.
